

CLAIMS

What I Claim Is:

1. A composition of matter useful for the treatment of killing microorganisms and human skin diseases, consisting of:

5 sulfuric acid of 98 percent purity combined in a 1 to 2 volume ratio with distilled water and ammonium sulfate in a ratio of 2.77 lbs. per gallon of H₂O;

combining the mixture under 15 psi pressure in a pressurized vessel above atmospheric pressure and heating the mixture to at least ⁴⁰⁰1200°F for at least 3 hours;

a 10 after the mixture is cooled, adding a stabilizer including ~~at least~~ 10 percent of the original mixture.
a

2. The composition of claim 1, wherein urea is substituted for ammonium sulfate.

B 15 ² 3. The composition of claim ⁶¹2, wherein once the mixture is heated, the mixture is stirred vigorously by air under pressure in said pressurized vessel.

B ³ 4. The composition of claim ⁶¹2, wherein the mixture is introduced under pressure into the pressurized vessel by spraying into the vessel.
20

B ^A 5. ~~The~~ method of preparing a composition of matter that is useful for the treatment of killing microorganisms and human skin diseases, comprising the steps of:

(a) preparing a sulfuric acid of 98 percent purity in
25 a first container;

(b) heating distilled water in a ratio of twice the volume of said sulfuric acid in a separate container to at least 140°F;

(c) mixing ammonium sulfate in said heated water in
30 10 a ratio of 2.77 lbs. per gallon of water;

9

(d) simultaneously combining the mixture of sulfuric acid, heated distilled water, and ammonium sulfate ^(mixture III) into a separate pressurized vessel by injection;

(e) heating the pressurized mixture to ~~at least~~ ⁹⁰⁰ ~~1200~~°F for at least 3 hours; and

(f) cooling said mixture and adding a stabilizer in said cooled mixture to at least 10 percent of the original ~~mixture~~ ^{B3} whereby a composition of matter results that is useful for the treatment of killing deleterious microorganisms.
